

A Turnkey Approach to Nature Based Tidal Wetland Conservation and Enhancement

Guinea Marsh Shoreline Protection and Oyster Restoration Plan

The Natrx Platform

Assess:

Remote risk assessment, analysis, planning, and design

Address:

Dry Forming™ advanced manufacturing and deployment

Appraise:

Monitoring, measurement, and reporting of project performance and value creation

Project Overview

Objective Develop a comprehensive tidal wetland restoration and conservation design plan for permitting and implementation funding requests

Focus Low to medium wave energy areas within the Guinea Marsh System suitable for oyster habitat enhancement

Funding Source NOAA Chesapeake Bay Office as part of Middle Peninsula Habitat Focus Area efforts

Guinea Marsh System, Mobjack Bay, VA

Key Project Stakeholders

Desired Outcomes

- Protect from erosion and stabilize land loss
- Enhance oyster and fisheries habitat
- Enhance recreational opportunities
- Improve water clarity and quality
- Strengthen ecosystem and community resilience
- Preserve blue carbon storage and sequestration capacity

Scope of Work

**Erosion
Analysis**

**Coastal
Typology
Categorization**

**Construction
Drawings**

**Budget
Estimates**

**Completed
JPA**

**Final
Reporting**

Synthesized Shoreline Information

Property:

Erosion Rates:

Conflict (SAV or Lease):

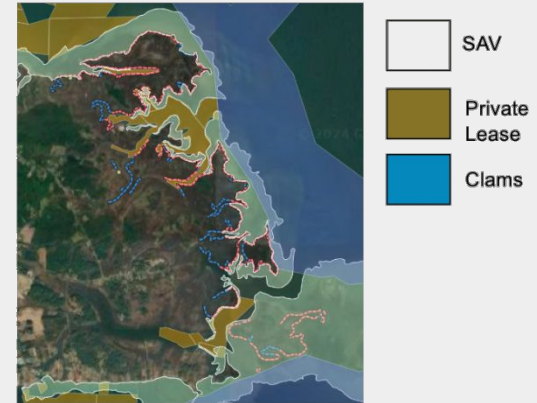

Shoreline Typology:

Wave Energy:

Vulnerable (e.g., spits):

Final Site Selection

- Output from desktop analysis
- Input from local stakeholders
- Determined 9 priority sites

Design Criteria & Process

Design Objectives

- Reduce wetland loss
- Foster oyster growth
- Account for sea-level rise

Key Criteria

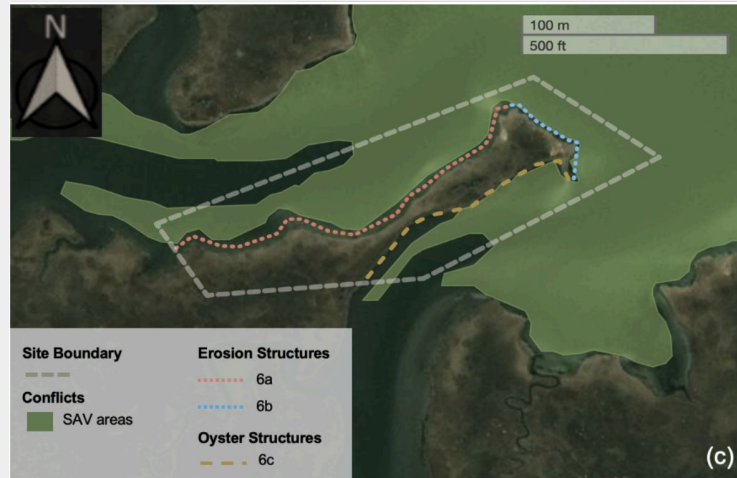

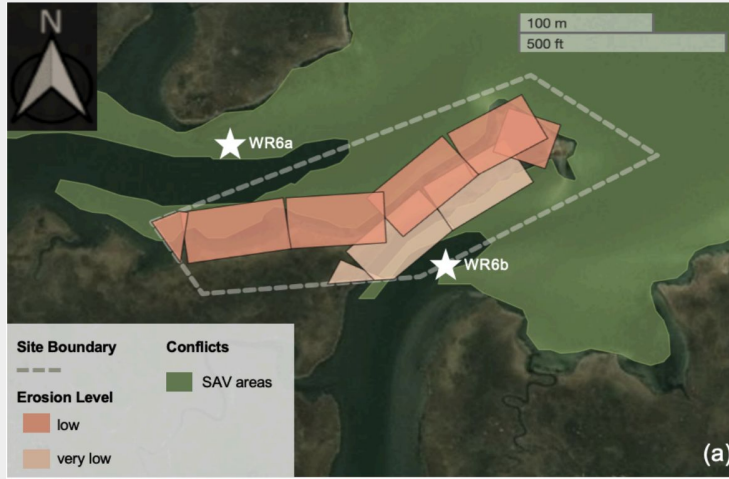

- Target Crest Elevation
- Bottom Contour(s)

Construction Cross Sections

Design Outputs

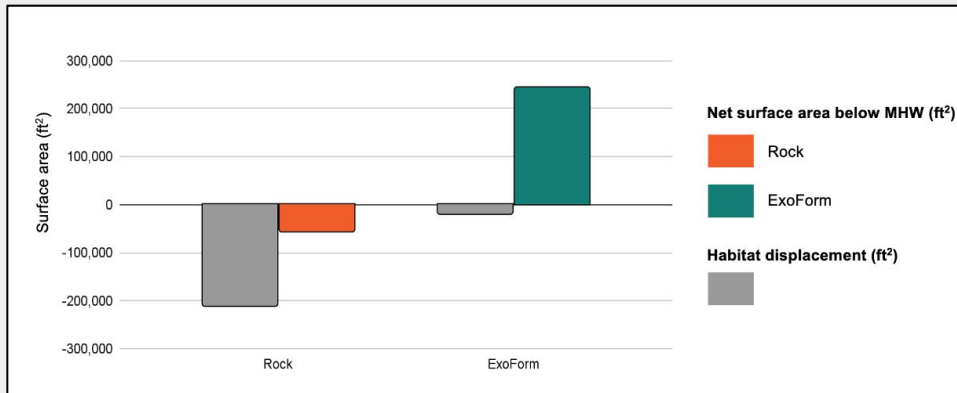

Site	Segment	Length (ft)	Contour (ft)	Crest (ft)	ExoForm Quantity	Footprint (ft ²)	Surface Area below MHW (ft ²)	Installed Cost
6	6a	1,005	-1.0	1.8	346	969	14,300	\$429K
6	6b	290	-1.3	1.5	100	280	4,803	\$124K
6	6c	646	-0.5	1.0	223	624	6,510	\$224K

Ecological Considerations

Net Habitat Impact

- Benthic Displacement
- Net Surface Area below MHW

Co-Benefits Reporting

- Sediment
- Nitrogen
- Phosphorous
- Carbon "Stop Loss"

Learnings and Next Steps

Consideration	Key Benefit
Cost	Purpose-built technology drives efficiency
Speed	< 6 months
Flexibility	Customize focus areas to stakeholder priorities
Stakeholders	Support practitioners and resource constrained constituencies
Outputs	Enable data driven downstream capabilities
Budget	Optimize finite budget resources and ROI
Permitting	Increase permit quality and shorten timelines
Funding	Improve proposal quality and increase likelihood of success
